

## EXPECTED RESULTS

- Increased awareness about the role of non-native citizens in the resilience of cities
- Greater capacity of EU cities to protect their citizens from the consequences of disasters
- Improved dialogue, cooperation and understanding between cities and their citizens
- Availability of improved material on risk awareness, risk management, citizens involvement
- Strengthened prevention and disaster risk management approaches in cities
- Promotion of active citizenship, volunteering and solidarity
- Protection of the most vulnerable categories
- Promotion and enhancement of inclusive, dynamic and risk aware European cities

## HOW TO RECOGNISE A RESILIENT CITY?

The resilience of a city is its capacity to respond to difficulties, emergencies, or stressful events in a **positive** and **constructive** manner.

This response should ultimately lead to a constructive recovery process involving all aspects of complexity that characterize the cities of today: cultural, social, and economic diversity, together with local cultural heritage. All this to achieve in-depth, long-term recovery of the city and all its inhabitants. Therefore, the resilience of a city is based on its capacity **not to leave behind** groups that are considered most at risk because of economic, social, cultural, and linguistic factors.

A resilient city draws from the **strength of all its inhabitants** and grows out of the differences between them. Resilient cities understand and embody diversity as layers of strength from which to draw upon, both in routine times as well in times of need (both natural and man-made disasters).

## Adoption of Multicultural Approaches towards Resilience Enhancement in the EU

Funded by  
European Union  
Civil Protection

## ABOUT THE PROJECT

The European project AMARE-EU focuses on developing concrete, low-cost and easy-to-be-applied solutions to involve and inform citizens of different origins in making their own city a better and safer place to live.

Thanks to a multi-sector and multi-skilled partnership composed of organizations active in the field of natural disasters, cultural cooperation, smart and resilient policies, cities coordination, migrants support and integration, a dedicated raising awareness self-assessment toolkit and related communication campaign will be developed and implemented.
